BRIEFS

Cone-beam CT course set for Chicago in June

Here's an opportunity to visit the Windy City this summer and earn eight continuing education credits through the ADA Summer Seminar Series.

The ADA is featuring the Basic Users Cone-Beam Computed Tomography (Level 1) course on June 15 at ADA

Headquarters.

Those attending will learn the principles behind CBCT, including CBCT image and technique selection; reducing radiation risk; understanding 3-D anatomical variations; recognition of key pathological processes; and CBCT interpretation and reporting. Speakers include Dr. Allan G. Farman, Dr. Maria Mora and Dr. Christos Angelopoulos.

See *CONE-BEAM*, Page 11

Number of operatories

The average number of operatories per private practice increased from 3.3 in 1990 to 4.3 in 2011.

Baby boomers boost utilization

Older patients show rise in dental expenditures

BY KELLY SODERLUND

As a whole, Americans aren't spending any more on dental care than they were five years ago but baby boomers may alter that.

After decades of steady growth, national dental expenditures began to slow in the early 2000s, years before the economy soured.

Once the Great Recession hit in 2008, national dental expenditures leveled off and have remained flat ever since. These changes are being

driven by fewer adults visiting the dentist.

This is according to the ADA Health Policy Resources Center, which published the research brief "National Dental Expenditure Flat Since 2008, Began to Slow in 2002."

But a subsequent brief shows that between 2000 and 2010, spending among those who visited the dentist increased among the elderly and those in higher income brackets.

Dental Economic Trends

An ongoing series

"As a result of the aging baby boomers, the elderly population is projected to increase from 48 million in 2015 to 92 million in 2060," according to the brief "Per-patient Dental Expenditure Rising, Driven by Baby Boomers." "The rising proportion of those over 65 years

old combined with relatively high per-patient dental expenditures among the elderly could significantly increase the dental expenditures among adults with a visit, buoying up the dental economy for years to come."

As outlined in previous research briefs, as a whole, fewer adults are visiting the dentist—a trend that started well before the recession.

ADA to host Mission of Mercy during Annual Session

'Coming together we can make a difference'

BY STACIE CROZIER

New Orleans—Annual Session-goers will have a unique opportunity to participate in a Mission of Mercy charity dental clinic Nov. 3 in New Orleans.

The ADA hopes to serve some 1,000 patients in need of dental care on the last day of the Oct. 31-Nov. 3 Annual Session.

The ADA will host the MOM event in conjunction with the America's Dentists Care Foundation with the support of the Louisiana Dental Association and the New Orleans Dental Association. Dentists, dental team members, dental and dental

team students, office staff, families and friends (age 18 and older) who will be in New Orleans for the Annual Session are encouraged to volunteer for the event.

"The ADA MOM program is a commitment to the public's oral health of the highest order," said Dr. Mark Huberty, a Sheboygan Falls, Wis., dentist and chair for the event. "While we're all bound by our commitment to the public, few other programs are so personal and felt so deeply as this very direct volunteering effort to help those most in need yet unable to help themselves. There are no barriers to care other than standing in line and being well enough to safely receive it. In addition, this program puts a face on a problem too big for any one of us alone to fix, but coming together we can make a difference."

Dr. Huberty is one of several organizers for the event and all are MOM program veterans from around the country, said Lani Becker, associate

ADA offers patient education tools in wake of Dr. Oz show on amalgam safety

"The Dr. Oz Show" aired a segment March 28 that may have alarmed dental patients about the safety of dental amalgam, the ADA said March 29 in an Issues Alert emailed to its members.

The nationally syndicated daytime health talk show is hosted by cardiothoracic surgeon Mehmet Oz, M.D.

Although the show's producer contacted the ADA for information beforehand, repeated offers by the Association to arrange an interview with an ADA spokesperson dentist were declined, the ADA said.

The producer would only accept written statements from the ADA, which were provided. These statements are posted on "The

Dr. Oz Show" website. The ADA has also issued a press statement (ADA.org/8448.aspx) about the segment, which is also posted online (doctoroz.com, search for "silver fillings").

In the Issues Alert, the Association offers a link to the ADA Council on Scientific Affairs statement on the safety of dental amal-

gam (ADA.org/1741.aspx) and provides a summary of key points that dentists can share with patients:

- Silver-colored fillings, also called dental amalgam, are safe, durable and affordable and have been used for generations.

- Amalgam is one of several materials I use. There are also tooth-colored materials and gold.

- The decision about what material to use is based on a variety of factors such as size and location of a cavity, insurance coverage and any cosmetic concerns you might have. There's really no one size fits all approach.

- [If applicable] I've used amalgam for years and have amalgam fillings in my own mouth.

- Major health and scientific bodies around the world agree that based on extensive scientific evidence, amalgam is safe and effective for dental patients.

- Always feel free to talk with me about your dental treatment options. As your doctor, I want to answer any questions you may have so you can make informed decisions about your dental care.

The decision about what material to use is based on a variety of factors such as size and location of a cavity, insurance coverage and any cosmetic concerns you might have. There's really no one size fits all approach.

- The best dental filling is no dental filling, so be sure to brush, floss and eat a balanced diet to help prevent cavities in the first place.

- The American Dental Association's website at www.MouthHealthy.org has information on dental materials and how to take care of your oral health.

The Association also offered information about the demonstration on "The Dr. Oz Show" measuring the release of vapor from brushing teeth in a synthetic mouth model with amalgam fillings, saying "That demonstration is misleading and doesn't take real world conditions into account. For example, the mouth model on the show is in a closed, dry environment, yet people have saliva in their mouths which reduces vapor activity. Credible scientific studies show that the amount of vapor released from amalgam fillings is so small it's in the billionths of a single ounce. A noted researcher calculated that it would take nearly 300 amalgam fillings in real life for even the most sensitive person to exhibit symptoms."

Lastly, patients may ask whether dental amalgam raises their risk of certain health conditions, the Association said in its email alert, suggesting dentists may wish to share the following information:

Not a single credible scientific study supports such a position. In fact, a number of organizations such as the American Academy of Pediatrics, National Multiple Sclerosis Society and the Alzheimer's Association have made statements about amalgam based on scientific evidence which is available online (ADA.org/8426). ■

Only 15 minutes, once a day to your patients' whitest smiles!

Perfecta® REV!®

Professional take-home tooth whitening

STEP 1 – REV! Gel: Patented 14% hydrogen peroxide formula delivers proven whitening results with only 15 minutes, once a day wear-time.¹ REV! gel is water-based to hydrate the teeth as it whitens and to avoid thermal sensitivity naturally.

STEP 2 – REV! Finishing Rinse: Refreshing mouth rinse is formulated for use immediately after REV! gel. Removes residual gel from teeth and any soft tissue, enhances whitening, and the alcohol-free, cool mint flavor leaves the mouth clean and refreshed after every treatment.

The Ideal Combination

Your patients will appreciate the short wear-time and the refreshing finishing rinse.

New dental product e-pub coming from the ADA

In the last week of April, ADA members will receive an email from their Association that includes a link to a new Dental Product Guide e-pub.

This new online resource, to be offered six times in 2013, will provide news and information on a wide range of dental products. It also will include brief reports from ADA-member dentists who volunteered to show how they use

selected dental products in step-by-step demonstrations involving their own real-life patients.

The dentists explain in detail how the designated products helped them respond to specific patient needs and concerns, leading to successful outcomes and positive patient experiences.

Watch for the email and link to the new Dental Product Guide e-pub coming within the next few weeks. ■

Boomers

Continued from Page 1

But because fewer seniors are requiring dentures and retaining their teeth, they remain subject to oral diseases and disorders.

"In general, retired boomers will require more dental services than previous senior cohorts and purchase more intensive services than younger patients," according to the brief, which was authored by Tom Wall, Kamyar Nasseh, Ph.D., and Marko Vujicic, Ph.D.

Dr. Vujicic is the managing vice president of HPRC.

Dr. Nasseh, a health economist in HPRC, is leading the effort to model the impact of population aging on dental spending through 2040.

Among adults 65 and older, real annual dental expenditures in the 2000s increased

"Taken together, our results suggest very strongly that the dental economy is in a major transition. Dental spending has not rebounded since the end of the Great Recession and has been stagnant, on a per capita basis, since 2008."

from \$655 to \$796 per person. For adults 21 to 64 in that same time period, the per-patient expense rose from \$557 to \$664. Average real per-patient dental expenditures rose from \$600 in 2000 to \$653 in 2010, according to HPRC.

While there was an increase in individual dental spending among older patients, nationwide, the average remained flat. In 2011, national dental expenditure was \$108 billion, slightly up from \$107 billion in 2010 (in inflation-adjusted 2011 dollars). In 2011, dental expenditures accounted for 4 percent

of overall national health care spending, down from 4.5 percent of national health expenditures in 2000.

There are a number of factors that may have contributed to a slowness in dental spending but the main one is declining dental care utilization among adults, according to HPRC.

On the flip side, on average, more children, particularly low-income children, are visiting the dentist, but their care is typically less costly, according to HPRC. Combine those facts with statistics on fewer adults visiting the dentist and it explains why national dental expenditures have remained flat the past five years.

In 2013, HPRC has published a series of research briefs related to utilization rates, dentists' income and expenditures.

All promote the same idea that the recession is not the cause of the decline in spending and utilization—something shifted years before the economic downturn.

National dental expenditure per capita (in constant 2011 dollars)

Source: Centers for Medicare and Medicaid Services; U.S. Bureau of Economic Analysis; U.S. Census Bureau. Note: Expenditure adjusted for inflation using the GDP implicit price deflator.

Annual real (2010 dollars) per-patient dental expenditures by patient age, 2000 to 2010

Source: Medical Expenditure Panel Survey, AHRQ. Note: Increases from 2000 to 2010 are statistically significant at the 1 percent level for the 21-64 age group and at the 5 percent level for the 65+ age group.

NAPB
National Association
of Practice Brokers

"Taken together, our results suggest very strongly that the dental economy is in a major transition. Dental spending has not rebounded since the end of the Great Recession and has been stagnant, on a per capita basis, since 2008," wrote Dr. Vujicic in the brief "National Dental Expenditure Flat Since 2008, Began to Slow in 2002."

"More importantly, in our view, our analysis shows convincingly that the dental economy began to slow well before the onset of the recent economic downturn. While overall health spending also began to slow in the early 2000s, the slowdown in dentistry is far more pronounced."

Dentists have entered a new reality in their profession. ADA leaders are trying to make sense of the data and figure out how to help dentists adjust.

"What this research shows is how dramatically dental care utilization and spending are shifting in the United States," Dr. Vujicic said.

"HPRC is taking a hard look at this data to help the ADA get a sense of the big picture moving forward."

"The intent is for the ADA to be guided by reliable data and evidence in its strategic discussions about how we can help ensure the success of our members in a changing environment."

To read the full research briefs, visit ADA.org/1442.aspx. ■

Dental office overhead

Practice expenses should include owner dentists' salaries, CDBP says

BY KELLY SODERLUND

The perception that dentists take home a hefty profit is misleading but changing the way dental practice expenses are publicized may change people's minds.

Members of the ADA Council on Dental Benefit Programs noted at their November meeting that one of the ways dental office overhead has been commonly calculated is faulty. Past survey reports released by the ADA Health Policy Resources Center reported average dental practice expenses as a percentage of gross billings as 60 percent, which suggests that dental offices have a 40 percent profit margin.

But those calculations didn't take into account the owner dentists' salaries, an important piece of the overall balance sheet for any business. Since it's a figure that's often quoted in debates about target minimum provider reimbursement levels within Medicaid programs, CDBP members thought it should be reflected accurately.

"Since no other business would consider omitting compensation for their CEO or top wage earners from overhead figures, many outside the dental industry may perceive this as a 35-40 percent profit," said Dr. David May, CDBP chair. "This may explain why legislators and foundations feel that it is not an issue if dental insurance companies cut reimbursements 10-15 percent."

Upon a recommendation from CDBP, the HPRC agreed to stop publishing the 60 percent statistic that excludes owner dentists' salaries when calculating dental office overhead. With owner dentists' salaries included as a cost, practice expenses average around 90 percent of gross billings, dropping the profit margin down to 10 percent. HPRC has published this statistic since 2006 but including it alongside the data that excludes owner dentists' salaries has led some to be confused by its interpretation.

"The commonly reported dental practice expense percentage of 60 percent, which excludes owner dentist salaries, if taken out of context, could lead to a mistaken perception about what it costs to operate a dental practice," HPRC staff members Bradley Munson, Adriana Menezes and Marko Vujicic, Ph.D., wrote in the research brief titled "Dental Practice Expenses Much Higher When Owner Salaries Accounted For," which can be found at ADA.org/1442.aspx. "It does not take into account the value of the practice owner's time."

The previous calculation method ignored the difference between gross billings and actual receipts collected, also known as the collection rate, according to HPRC. When the collection rate is taken into account under the new measure, the average expense percentage increases to around 97 percent, HPRC reported in its research brief.

"Since more than 80 percent of active private practitioner dentists in the United States are practice owners, the traditional method underestimates the true cost of operating a dental practice. As a measure of practice expenses excluding owner labor costs, of course, it remains valid," the research brief said. "Comparing dental practice expenses (including owner salaries) to gross billings actually collected, we believe, provides the most informative measure of dental practice expenses. Accounting for collection rates is particularly important since they have been falling steadily since 2006."

Dr. May hopes that the updated figures will resonate with insurance companies, some of which have decreased the maximum allowable fees dentists receive.

"We wanted to put an end to the miscon-

ception that dentists aren't greatly affected when insurance companies decrease reimbursement rates," Dr. May said. "By updating the way we publicize dental office overhead, we're giving insurance companies, legislators and the public the most accurate information from which to shape their opinions." ■

SNODENT takes the global stage

ADA and WHO evaluating latest version of International Classification of Diseases

BY KELLY SODERLUND

The Association is taking another step on the world stage through its efforts to evaluate the oral health codes within the latest version of the International Classification of Diseases.

The ADA is working with the World Health Organization by using the Association's dental diagnostic codes to compare with ICD-11 oral health codes.

The WHO and ADA will use the Systematized Nomenclature of Dentistry, also known as SNODENT, to determine if the oral health codes within ICD-11 are complete, comparable and compatible. ICD-11 will be the latest version of a disease classification that's used to record many types of health and vital records, including death certificates. Countries that are members of the WHO use these records

to compile national mortality and morbidity statistics, which may be used to determine financial reimbursement and resource allocations.

SNODENT is a vocabulary designed for use in the electronic health records environment. Any dentist who uses electronic health records or who plans to in the future should be aware the use of diagnostic codes is on the

Representing the ADA: Dr. Mark Jurkovich traveled to Denmark to convene the International Health Terminology Standards Development Organization's Dental Specialty Interest Group, identify priorities and develop a work plan. The IHTSDO is the leading provider of standardized clinical terminology in the world.

horizon. SNODENT will be an important component within certified Electronic Health Records Systems for the federal and state governments' Medicaid and Medicare meaningful use incentive reimbursement programs.

European countries are already using ICD-10, but the United States is still in the process of moving into the 10th version. In the U.S., ICD-10 will become mandatory in 2014. ICD-10 was endorsed by the World Health Assembly in 1990, and WHO Member States began using it in 1994. The 11th revision of the classification will continue until 2015.

"This collaboration with the World Health Organization elevates the ADA to the global stage," said Dr. Poul Erik Petersen, who is leading the WHO Oral Health Topic Advisory Group. "The Association has worked hard to develop SNODENT so that U.S. dentists have a consistent dental terminology when they use electronic health records. By using SNODENT to revise and evaluate ICD-11, we can be assured that the newest version of the International Classification of Diseases is more accurate and comprehensive than previous endeavors. ADA member dentists who participate in the federal government's EHR Meaningful Use program can know they are using the most up-to-date diagnostic codes in the world."

SNODENT is incorporated into the International Health Terminology Standards Development Organization's SNOMED CT reference terminology. The IHTSDO is the leading provider of standardized clinical terminology in the world. The WHO has already established an agreement with the IHTSDO to use SNOMED CT in developing ICD-11. The use of SNODENT will work the same way.

The IHTSDO Dental Specialty Interest Group met April 8 in Copenhagen, Denmark as part of the IHTSDO's annual business meeting. The Dental SIG's main responsibilities included reviewing proposed new dental content, updating existing dental content, plus the proposal and development of new dental content-related projects. As part of the ADA/IHTSDO agreement, the Dental SIG is chaired by Dr. Mark Jurkovich, a member of the ADA Council on Dental Benefit Programs.

Dr. Jurkovich traveled to Denmark to convene the SIG, identify priorities and develop a work plan. ■

GOVERNMENT

Medicare claim denial process begins May 1

BY CRAIG PALMER

Washington—Phase 2 implementation of a new Medicare requirement could affect dentists who order or provide clinical laboratory, imaging, DMEPOS (durable medical equipment, prosthetics, orthotics and supplies) or home health items or services that are covered by Medicare. The provider of the item or service will not be able to submit a claim to Medicare if the ordering dentist is not enrolled or properly opted out.

The claim denial process begins May 1.

As of that date, a provider of a covered clinical laboratory, imaging, DMEPOS or home health service will not be paid if the ordering or certifying practitioner has not enrolled in Medicare or properly opted out.

Completing the enrollment and opt-out processes takes time, and dentists should be aware of the regulation and the May 1 edits if they are likely to be affected by this regulation.

The Association offers member resources on Medicare enrollment and Medicare opt-out procedures at ADA.org, including a Sample Medicare Opt Out Private Contract. Nonmembers may obtain information by consulting the CMS agency or local Medicare contractor. Information on Medicare contractors is available through the CMS “Provider Compliance Group Interactive Map” at www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/provider-compliance-interactive-map/index.html.

Medicare officials modified the proposed regulations in several respects in response to Association advocacy before issuing the final rule June 26, 2012 (“Specialist Services Excluded From Medicare Enrollment Rule,” Aug. 20, 2012, ADA News). The Association urged that the rule should not apply to referrals to specialists, and the final rule removed this proposed requirement. Medicare officials also delayed full implementation of the Affordable Care Act requirement.

Phase 1 edits notified providers if the ordering or certifying practitioner was not enrolled or properly opted out but did not deny payment.

The announcement of Phase 2 implementation in a special edition of MLN Matters at www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLN-MattersArticles/Downloads/SE1305.pdf includes guidance on orders or referrals by dentists.

- “Effective May 1, 2013 the Centers for Medicare & Medicaid Services (CMS) will turn on the Phase 2 denial edits. This means that Medicare will deny claims for services or supplies that require an ordering/referring provider to be identified and that provider is not identified, is not in Medicare’s enrollment records, or is not of a specialty type that may order/refer the service/item being billed.”

- “Orders or referrals by dentists: Most dental services are not covered by Medicare; therefore, most dentists do not enroll in Medicare. Dentists are a specialty that is eligible to order and refer items or services for Medicare beneficiaries (e.g. to send specimens to a laboratory for testing). To do so, they must be enrolled in Medicare. They [dentists who enroll using CMS-855O] may enroll by filling out the paper CMS-855O or they may use Internet-based PECOS. They will not be submitting claims to Medicare for services they furnish to Medicare beneficiaries.”

The CMS uses the term “ordering/referring” to refer to practitioners who order or certify covered items and services. PECOS

is the Internet-based Provider Enrollment, Chain and Ownership System.

The Association recommended a simplified enrollment process for dentists who want to enroll in Medicare solely for ordering and certifying covered items and services (“ADA: PECOS Enrollment Rule ‘Unnecessarily Burdensome,’” July 12, 2010, ADA News) and CMS announced approval of a simplified process Aug. 16, 2010 (“CMS: Medicare Guidance,” Sept. 20, 2010, ADA

News) in an online notice.

This simplified enrollment process, using form CMS-855O, does not require the dentist’s financial information because doctors who enroll only to order/certify will not be directly billing Medicare. Doctors who directly provide Medicare eligible services, such as biopsies, are not eligible for the simplified process and need to either enroll in Medicare using a different enrollment form, CMS-855I, or opt out.

In lieu of enrolling, a dentist may elect to opt out of Medicare and provide Medicare-covered services by entering written private contracts with their Medicare-eligible patients and by filing an affidavit with each applicable Medicare carrier.

Dentist referrals to specialists are not covered by the final rule, and referral to a specialist, such as an oral surgeon, would not require

See MEDICARE, Page 8

This time, there's a leader following you.

Keeping pace with all you do is just as important to us as keeping you up-to-date on our latest dental innovations. The way we see it, your responsibilities don't end with teeth, so neither should ours. We've always been a leader in post and core technology, but now we also want to deliver helpful solutions to the many work-related problems you face in a day. Help us follow your lead to better meet your needs. Visit www.Pentron.com, or call us at 1-800-551-0283.

"DrQuickLook™ is so easy to use. It takes about a minute to learn to use and patients love it. They love holding the monitor while I scan the teeth, and when I show them specific problems they always have the 'oh wow' response! It makes explaining treatment so much easier!"

Dr. Ken Bendik, Beverly Hills, CA

"I use it multiple times each day in the office and my case acceptance rate has soared! Patients see things they don't like and this also generates more treatment."

Dr. Robert Fields, Van Nuys, CA

"I'm still blown away by its ease of use, practicality, and portability. Thanks for making a communications tool with the small town practitioner in mind."

Protect yourself from cyber threats

FCC offers new small business resource

Washington—Dentists who want to learn more about cyber threats can consult a new resource published by the Federal Communications Commission.

Cybersecurity for Small Business, www.fcc.gov/cyberforsmallbiz, provides tip sheets, resources to create customized cybersecurity plans and links to government websites with security information. The FCC also released an updated one-page Cybersecurity Tip Sheet that features new tips on creating a mobile device action plan and on payment and credit card security.

The tips include training employees in security principles; making backup copies of important business data and information; controlling physical access to computers and creating user accounts for each employee; and limiting employee access to data and information, among others. ■

Medicare

Continued from Page 7

the referring dentist to enroll in Medicare. The specialist could submit a Medicare claim without having to list the referring dentist. However, dentists ordering clinical laboratory or imaging services or durable medical equipment must enroll in Medicare or opt out for providers of those services to be reimbursed by Medicare.

Oral pathologists have reported to the ADA that they bill their services to Medicare as clinical laboratory services. Therefore, ordering the pathology review of specimens will require the ordering dentist to enroll as a Medicare provider or opt out.

The MLN Matters notice advises, "If you order or refer items or services for Medicare beneficiaries and you do not have a Medicare enrollment record, you need to submit an enrollment application to Medicare ... Waiting too long to begin this process could mean that your enrollment application may not be processed prior to the May 1, 2013 implementation date of the ordering/referring Phase 2 provider edits."

In Phase 2 implementation, if the ordering/referring provider does not pass the edits, the claim will be denied. This means that the Medicare billing provider will not be paid for the items or services that were furnished based on the order or referral, CMS said. If oral pathologists cannot receive payment for their services due to lack of enrollment, they may decline to accept specimens from doctors who are not enrolled.

The Medicare Learning Network notice is intended for physicians, including dentists, and non-physician practitioners including interns, residents, fellows and providers employed the Department of Veterans Affairs, Department of Defense or Public Health Service who order or refer items or services for Medicare beneficiaries and other Part A and Part B providers and suppliers. ■

Task force studies ADA Library

Report due to Board in June

BY JUDY JAKUSH

The ADA Library Task Force wants members to know that in keeping with Resolution 159H-2012, the group is investigating the options that will ensure that the ADA Library provides members value now and well into the future.

"Of crucial importance" emphasized Dr. Joseph Hagenbruch, ADA 8th District Trustee

and chair of the ADA Library Task Force, "the group feels that it is absolutely imperative to first clarify that the ADA Library is not closing. The 2012 ADA House of Delegates has asked that the appropriate ADA agency develop a transition plan for presentation to the 2013 ADA House of Delegates regarding budget-conscious, sensible, responsible and sustainable options that would not only preserve ADA pe-

riodicals, collections, other materials and services, but also embrace new technology, such as digital collections and electronic capabilities.

"The ADA House of Delegates will have an opportunity to decide on an actual increase in the number of benefits that the ADA Library will offer the membership," continued Dr. Hagenbruch, "but also ensure that the various ADA departments that are heavily reliant on the ADA Library for various services, mechanisms and material will always have what is needed to be effective, remain knowledgeable and efficient."

He said the task force is committed to the ADA Library's unique collections. "This includes very rare, historical and valued property—such as books, journals, artwork, one-of-a-kind gifts and numerous awards, just to name a few. It is the task force's hope that one day plans could be developed to display, in a visible location, many of the Library's uniquely rare collections and prized possessions that have seldom been seen by members," Dr. Hagenbruch noted.

At the Annual Session in October 2012, the House passed Res. 159H-2012, which states: Resolved, that the library collections and physical space be maintained without disposition in 2013 and that appropriate agencies develop a transition plan for the library to be reported to the 2013 House of Delegates.

In response, the Library Task Force was appointed by Dr. Robert Faiella, ADA president. The group has met twice at ADA Headquarters as well as holding a number of telephone conference calls. Besides Dr. Hagenbruch, the group consists of Drs. Joseph P. Crowley, ADA 7th District trustee; Gary Roberts, ADA 12th District trustee; Hal Fair, ADA 16th District trustee; and Dr. Anthony Ziebert, ADA senior vice president, education and professional affairs.

Their charge has led them to meet in person or via teleconference with librarians at dental and medical schools as well as with other experts in the field; to direct the inventory of ADA Library

"The principal aim of the task force is to create a transition plan that includes updates of the ADA Library material, services and technology to better reflect a caliber consistent with contemporary library standards and which meets or exceeds member expectations, while at the same time adhering to the proposed budget limits."

holdings by category, including determining whether an item was unique to the ADA or held by other collections; to meet with Library users, including members of the ADA, its staff, the public and other stakeholders to precisely assess how and by whom ADA library services are used.

"The principal aim of the task force is to create a transition plan that includes updates of the ADA Library material, services and technology to better reflect a caliber consistent with contemporary library standards and which meets or exceeds member expectations, while at the same time adhering to the proposed budget limits," said Dr. Hagenbruch.

The task force is charged with submitting the report of its findings and recommendations to the ADA Board of Trustees at its June meeting.

"It is premature to discuss any details of the draft proposal at this time, because it is not finished," Dr. Hagenbruch stated. "Release and transmittal of the plan to the members of the 2013 House of Delegates will likely follow soon after the June Board of Trustees meeting. In that vein, and fully mindful of the necessary, imposed economic constraints, the task force hopes to sufficiently inform and engage the Board, delegates, alternate delegates, councils, member dentists and everyone else relative to the incredible possessions and collections, wealth of knowledge and abundance of opportunities that can possibly exist and be accessible with the accompanying expectation of an exceedingly bright ADA Library future." ■

Landmark articles in Journal of the American Dental Association focus on key developments in dentistry

As part of its ongoing commemoration of its centennial year in 2013, The Journal of the American Dental Association each month features a specially selected "landmark" article that was published in JADA over its first century.

This month's issue—April—spotlights a 1941 article by Drs. Isaac Schour and Maury Massler, from the Department of Histology, University of Illinois College of Dentistry, Chicago, "The Development of the Human Dentition."

The commentators, Drs. Louise Brearley Messer, University of Melbourne, Australia, and Michael J. Till, University of Minnesota, describe it as "truly a landmark article from two perspectives: first, as a culmination and synthesis of many years' work by the authors; and, second, in the undergirding of far-reaching applications that remain relevant today."

In May, JADA will feature a 1953 article, "Hydraulic Turbine Contra-Angle Handpiece," by Drs. Robert J. Nelsen, Carl. E. Pelander and John W. Kumpula, all of whom

JADA

100

1913
2013

were researchers at what then was called the National Bureau of Standards (now the National Institute of Standards and Technology). The commentators, Drs. Robert Eshleman and David Sarrett, Vir-

ginia Commonwealth University, credit the advent of the high-speed dental air turbine handpiece with revolutionizing and forever changing the practice of dentistry.

"All dentists and their patients owe a debt of gratitude to the original pioneers and dental manufacturers who developed and produced the high-speed handpiece for use in the everyday practice of dentistry," they conclude. ■

Cone-beam

Continued from Page 1

By the course's conclusion, participants will be able to understand the basic principles of cone-beam computed tomography; identify the risks associated with ionizing radiation and how to minimize exposure; recognize when to prescribe CBCT scans based on high-yield criteria and minimized radiation dose; review associated anatomy and the basics of pathology; discuss basic interpretation to create a report of CBCT images and identify when to refer for a second opinion or over-read; understand CBCT technique tips; and recognize errors and artifacts.

For more information, including a course schedule and speaker biographies, visit ADA.org/8359.aspx.

The website includes ADA hotel and airfare discounts from 2 to 10 percent and information about a graduate student member rate of \$295.

Register for Basic Users Cone-Beam CT by contacting the ADA Member Service Center at 1-312-440-2500 Monday through Friday, 8:30 a.m. to 5 p.m. Central Time.

Additional questions may be directed by email to seminarseries@ada.org.

JADA Live seminars

Also coming in 2013 are additional JADA Live seminars.

The Journal of the American Dental Association launched the JADA Live program in 2012 as a series of continuing education seminars that take place at selected venues across the country to provide dentists with more of what they need to improve their practices.

The schedule for the 2013 JADA Live, which includes a program on digital imaging, will be announced soon.

Dentists who participate in a JADA Live seminar can earn CE credits provided by CERP, the ADA Continuing Education Recognition Program.

The number of CE units available will vary with the seminar. ■

Pharmaceutical
Solutions

When it comes to dental pain,
not all patients can be treated the same

Citanest® DENTAL provides comfort
to patients who are extra
sensitive to epinephrine

Anesthetics with epinephrine generally produce a longer duration of action.

Citanest® Plain DENTAL is recommended for use in maxillary infiltration anesthesia for procedures in which the painful aspects can be completed within 15 minutes after the injection. For longer procedures, or those involving maxillary posterior teeth where soft tissue numbness is not troublesome to the patient, Citanest® Forte DENTAL is recommended.

Please see Brief Summary of Prescribing Information on adjacent page.

Citanest® DENTAL is the prilocaine trusted by dental professionals since 1965.

Infiltration injections, soft tissue anesthesia duration	2 hours*	2 ¼ hours*
Inferior alveolar nerve blocks, soft tissue anesthesia duration	2 ½ hours*	3 hours*

Citanest® Plain DENTAL
(epinephrine-free
formulation)

Citanest® Forte DENTAL
(low epinephrine
formulation [1:200,000])

*All durations represent average times.

PHA04-0910-1

Speakers share the stage for this year's New Dentist Conference, Annual Session

BY KAREN FOX

Denver—Those attending continuing education programs at the ADA 27th New Dentist Conference are in for a special treat. Three conference speakers will provide a continuation of their educational programs at the ADA Annual Session this fall. The featured speakers and their conference presentations include:

Citanest® Plain Dental (prilocaine HCl Injection, USP) 4% Injection
Citanest® Forte Dental (prilocaine and epinephrine Injection, USP) 4% Injection with epinephrine 1:200,000
For Local Anesthesia in Dentistry

CONTRAINDICATIONS Prilocaine is contraindicated in patients with known history of hypersensitivity to amide type local anesthetics and in patients with congenital or idiopathic methemoglobinemia. **WARNINGS** PRACTITIONERS WHO USE LOCAL ANESTHETICS SHOULD BE WELL VERSED IN DIAGNOSIS AND MANAGEMENT OF EMERGENCIES THAT MAY ARISE FROM THEIR USE. RESUSCITATIVE EQUIPMENT, OXYGEN AND OTHER RESUSCITATIVE DRUGS SHOULD BE IMMEDIATELY AVAILABLE. To minimize the likelihood of intravascular injection, aspiration should be performed before the local anesthetic is injected. If blood is aspirated, the needle must be repositioned until no blood can be elicited by aspiration. The absence of blood in the syringe does not assure that intravascular injection will be avoided. Citanest Dental with epinephrine contains sodium metabisulfite, a sulfite that may cause allergic-type reactions including anaphylactic symptoms and life-threatening asthmatic episodes. Sulfite sensitivity is seen more frequently in asthmatic than in nonasthmatic people. **Methemoglobinemia:** Prilocaine has been associated with methemoglobinemia. Very young patients, patients with congenital or idiopathic methemoglobinemia, or patients with glucose-6-phosphate deficiencies are more susceptible. Patients taking drugs associated with methemoglobinemia (eg, sulfonamides, acetaminophen, acetanilid, aniline dyes, benzocaine, chloroquine, dapsone, naphthalene, nitrates and nitrites, nitrofurantoin, nitroglycerin, nitroprusside, pamaquine, para-aminosalicylic acid, phenacetin, phenobarbital, phenytoin, primaquine and quinine) are at greater risk. **PRECAUTIONS General:** Prilocaine's safety and effectiveness depend on proper dosage, correct technique, adequate precautions, and readiness for emergencies. The lowest effective dosage should be used. Repeated doses of prilocaine may cause significant increases in blood levels with each repeated dose. Tolerance to elevated blood levels varies. Patients that are debilitated, elderly, acutely ill, and children should be given reduced doses commensurate with age and physical status. Prilocaine should be used with caution in those with severe shock or heart block. Local anesthetic injections containing a vasoconstrictor should be used cautiously in areas of the body supplied by end arteries or having otherwise compromised blood supply. Patients with peripheral vascular disease and those with hypertensive vascular disease may exhibit exaggerated vasoconstrictor response. Ischemic injury or necrosis may result. Preparations containing a vasoconstrictor should be used with caution during or after administration of potent general anesthetics, since cardiac arrhythmias may occur. Cardiovascular and respiratory (adequacy of ventilation) vital signs and the patient's state of consciousness should be monitored after each local anesthetic injection. Restlessness, anxiety, tinnitus, dizziness, blurred vision, tremors, depression or drowsiness should alert the practitioner to the possibility of central nervous system toxicity. Signs and symptoms of depressed cardiovascular function may result from a vasovagal reaction, particularly if the patient is in an upright position. Prilocaine should be used with caution in patients with hepatic disease. Patients with severe hepatic disease are at greater risk of developing toxic plasma concentrations. Prilocaine should be used with caution in patients with impaired cardiovascular function since they may be less able to compensate for functional changes associated with the prolongation of A-V conduction produced. Since many drugs used during the conduct of anesthesia are potential triggering agents for familial malignant hyperthermia, it is suggested that a standard protocol for the management of malignant hyperthermia should be available. Early

unexplained signs of tachycardia, tachypnea, labile blood pressure and metabolic acidosis may precede temperature elevation. Outcome success is dependent on early diagnosis, prompt discontinuance of the suspect triggering agent(s) and institution of treatment, including oxygen therapy, indicated supportive measures and dantrolene (consult dantrolene sodium intravenous package insert before using). **Use in the Head and Neck Area:** Small doses of local anesthetics injected into the head and neck area, including retrobulbar, dental and stellate ganglion blocks, may produce adverse reactions similar to systemic toxicity seen with unintentional intravascular injections of larger doses. Confusion, convulsions, respiratory depression and/or respiratory arrest, and cardiovascular stimulation or depression have been reported. These reactions may be due to intra-arterial injection of the local anesthetic with retrograde flow to the cerebral circulation. Patients receiving these blocks should have their circulation and respiration monitored and be constantly observed. Personnel for treating adverse reactions should be immediately available. Dosage recommendations should not be exceeded. **Information for Patients:** The patient should be informed of the following: possibility of temporary loss of sensation and muscle function after infiltration or nerve block injections; to exert caution to avoid inadvertent trauma to the lips, tongue, cheek mucosae or soft palate when these structures are anesthetized; to postpone ingesting food until normal function returns; and to consult the dentist if anesthesia persists, or if a rash develops. **Clinically Significant Drug Interactions:** Local anesthetic injections containing epinephrine or norepinephrine in patients receiving monoamine oxidase inhibitors, tricyclic antidepressants or phenothiazines may produce severe, prolonged hypotension or hypertension. Concurrent use of these drugs should generally be avoided, but when necessary, careful patient monitoring is essential. Concurrent administration of vasopressor and ergot-type oxytocic drugs may cause severe, persistent hypertension or cerebrovascular accidents. **Drug/Laboratory Test Interactions:** Intramuscular injection of prilocaine may result in increased creatine phosphokinase levels and thus, the use of this enzyme determination, without isoenzyme separation, as a diagnostic test for the presence of acute myocardial infarction may be compromised. **Carcinogenesis, Mutagenesis, Impairment of Fertility:** Chronic oral toxicity studies of ortho-toluidine, a prilocaine metabolite, in mice (150–4800 mg/kg) and rats (150–800 mg/kg) have shown that ortho-toluidine is a carcinogen in both species. Ortho-toluidine (0.5 mg/mL) showed positive results in *Escherichia coli* DNA repair and phage-induction assays. Urine concentrates from rats treated with ortho-toluidine (300 mg/kg, orally) were mutagenic for *Salmonella typhimurium* with metabolic activation. **Use in Pregnancy: Teratogenic Effects** — Pregnancy Category B. Although reproduction studies performed in rats at prilocaine doses up to 30 times the human dose revealed no evidence of impaired fertility or harm to the fetus, animal reproduction studies are not always predictive of human response. This should be considered before administering prilocaine to women of childbearing potential, especially during early pregnancy when maximum organogenesis takes place. **Nursing Mothers:** Because many drugs are excreted in human milk, prilocaine should be used cautiously in a nursing woman. **ADVERSE REACTIONS** Swelling and persistent paresthesia of lips and oral tissues may occur. There have been reports of persistent paresthesia lasting weeks to months, and in rare instances paresthesia lasting greater than one year. Adverse experiences after prilocaine administration are similar to those observed with other amide local anesthetics. These adverse experiences are generally dose-related and may result from high plasma levels caused by excessive dosage, rapid absorption or unintentional intravascular injection, or may result from patient hypersensitivity, idiosyncrasy or diminished tolerance. Serious adverse experiences are generally systemic in nature. The following types are those most commonly reported: **Central Nervous System:** CNS manifestations are excitatory and/or depressant and may

- Dr. Lee Ann Brady—The Art of Treatment Planning and Case Presentation, Part 1 (6 CE hours).
- On July 20 at the New Dentist Conference, Dr. Brady presents a systemized approach to treatment planning and case presentation covering esthetics, function and health. Participants will have hands-on experience with multiple case studies and learn how the real-world cases were ultimately managed.

be characterized by lightheadedness, nervousness, apprehension, euphoria, confusion, dizziness, drowsiness, tinnitus, blurred or double vision, vomiting, sensations of heat, cold or numbness, twitching, tremors, convulsions, unconsciousness, respiratory depression, and arrest. Excitatory manifestations may be brief or may not occur at all. The first manifestation of toxicity may be drowsiness merging into unconsciousness and respiratory arrest. Drowsiness after administration of prilocaine is usually an early sign of a high blood level of the drug and may occur as a consequence of rapid absorption. **Cardiovascular System:** Cardiovascular manifestations are usually depressant and characterized by bradycardia, hypotension and cardiovascular collapse, which may lead to cardiac arrest. Signs and symptoms of depressed cardiovascular function may commonly result from a vasovagal reaction, particularly if the patient is upright. Less commonly, they may result from a direct effect of the drug. Failure to recognize the premonitory signs (eg, sweating, a feeling of faintness, changes in pulse or sensorium) may result in progressive cerebral hypoxia and seizure or cardiovascular catastrophe. Management consists of placing the patient in the recumbent position and ventilation with oxygen. Supportive treatment of circulatory depression may require administration of intravenous fluids, and, when appropriate, a vasopressor (eg, ephedrine) as directed by the clinical situation. **Allergic:** Allergic reactions are characterized by cutaneous lesions, urticaria, edema or anaphylactoid reactions. Allergic reactions as a result of sensitivity to prilocaine are extremely rare and, if they occur, should be managed by conventional means. **Neurologic:** Adverse reactions (eg, persistent neurologic deficit) associated with the use of local anesthetics may be related to the technique used, the total dose administered, the particular drug, the route of administration, and the physical condition of the patient. **OVERDOSAGE** Acute emergencies from local anesthetics are generally related to high plasma levels encountered during therapeutic use of local anesthetics. **Management of Local Anesthetic Emergencies:** The first consideration is prevention, best accomplished by careful and constant monitoring of cardiovascular and respiratory vital signs and state of consciousness after each local anesthetic injection. At the first sign of change, oxygen should be administered. The first step in the management of convulsions is immediately attending to the maintenance of a patent airway and assisted or controlled ventilation with oxygen and a delivery system capable of permitting immediate positive airway pressure by mask. Immediately after the institution of these ventilatory measures, the adequacy of the circulation should be evaluated. Should convulsions persist despite adequate respiratory support, and if the status of the circulation permits, small increments of an ultra-short acting barbiturate (eg, thiopental or thiamylal) or a benzodiazepine (eg, diazepam) may be administered intravenously. The clinician should be familiar with these anticonvulsant drugs. Supportive treatment of circulatory depression may require intravenous fluids and, when appropriate, a vasopressor as directed by the clinical situation (eg, ephedrine). If not treated immediately, both convulsions and cardiovascular depression can result in hypoxia, acidosis, bradycardia, arrhythmias and cardiac arrest. If cardiac arrest occurs, standard cardiopulmonary resuscitative measures should be instituted. Endotracheal intubation, employing drugs and techniques familiar to the clinician, may be indicated, after initial administration of oxygen by mask, if difficulty is encountered in the maintenance of a patent airway or if prolonged ventilatory support (assisted or controlled) is indicated. Dialysis is of negligible value in the treatment of acute overdose with prilocaine. Methemoglobinemia is generally dose related but may occur at any dose. While values of less than 20% do not tend to produce any clinical symptoms, cyanosis at 2–4 hours after administration should be evaluated in terms of the patient's general health status. Methemoglobinemia can be reversed when indicated by intravenous methylene blue at a dosage of 1–2 mg/kg given over five minutes.

- At the ADA Annual Session Oct. 31-Nov. 3 in New Orleans, Dr. Brady will present at the Women Dentists Fast Track and conduct a hands-on workshop, Creating Exquisite Anterior Provisionals.
- Dr. Paul Homoly—Making it Easy for Patients to Say Yes! Part 1 (6 CE hours).
- In this course, which takes place July 20 at the New Dentist Conference, participants will learn practical techniques to improve patient acceptance even in the most complex cases. Dentists have the technical knowledge to provide cosmetic, implant and restorative dentistry, but often become frustrated with patient acceptance of their treatment recommendations. Today's dentist and team need a process for guiding their patients toward good dental health decisions.
- At the ADA Annual Session this fall, Dr. Homoly presents Just Because You're an Expert ... Doesn't Make You Interesting and other courses, all at no fee.
- Dr. Harold Crossley—Medical and Dental Implications of Most Prescribed Medications, Part 1 (6 CE hours).
- Many physician-prescribed medications used by patients have dental implications and side effects affecting a dentist's treatment plan. During Dr. Crossley's presentation, held July 20 at the New Dentist Conference, dentists will learn to understand the indications, contraindications and side effects of the most commonly prescribed medications. Familiarity with these drugs will provide you with a better appreciation for the health profile of your dental patient.
- At the ADA Annual Session, Dr. Crossley presents the Pharmacology Expert Panel with Dr. Robert Fazio, also at no fee.
- "These are some of the most in-demand speakers we have had for ADA sessions," said Dr. Gregory J. Peppes, Council on ADA Sessions program chair. "All three draw tremendous crowds because of the common-sense knowledge they share with their audiences."
- Each speaker has a specific area of interest—clinical issues (Dr. Brady), practice management (Dr. Homoly) and professional issues (Dr. Crossley)—said Dr. Peppes, but "having them at both the New Dentist Conference and ADA Annual Session demonstrates the ADA's commitment to lifelong learning throughout dentists' careers, for new dentists starting out through more seasoned professionals."
- "Dr. Homoly is one of the greatest speakers on case presentation," said Dr. Chris Salierno, chair of the New Dentist Committee. "New dentists are always hungry for solid tips on how to better communicate with patients, especially when it comes to finances and complex treatment plans. Dr. Brady is able to show the critical connection between esthetics and function. From treatment plan to provisional phase to final execution, we'll see how a world-renowned cosmetic dentist gets her cases done."
- The New Dentist Conference gives attendees a number of peer networking opportunities, and the Annual Session features a special reception exclusively for new dentists.
- "Aside from the amazing CE, I look forward to catching up with old friends," said Dr. Salierno. "Both events provide networking opportunities, and I always make a few new connections, too."
- For more information about the New Dentist Conference, visit ADA/newdentistconf or call ext. 2779. Registration is open. ■

MOM

Continued from Page 1

executive director of the Wisconsin Dental Association and ADCF board member.

"This is the first MOM program that will actively recruit dental professionals from around the country to participate at one location," said Ms. Becker. "And the program will need about 800 volunteers, including dentists, team members, clerical and support staff and more. We hope that Annual Session-goers will consider this a great team-building activity for their office staff or a family event with their spouses and children 18 and older."

MOM volunteers serve in a multitude of roles during a typical event. Roughly half of the 800 or so volunteers are dental professionals who provide triage services, radiology, diagnostics and treatment, including restorative and specialty care. Other volunteers—students, laboratory technicians and front office specialists—also help the massive MOM clinics run smoothly. About 200 nonclinical volunteers cover support services from registration, patient greeting and escorting, conducting exit interviews, site set-up and teardown, parking attendants and many more roles.

Dr. Terry Dickinson, Virginia Dental Association executive director, launched the first MOM program in Virginia in 2000. This year, 27 states will host one or more charitable dental clinics.

"I have a great sense of pride that hundreds of thousands of volunteers have joined forces through the Mission of Mercy to help people in need. What MOM does is define who we are as individuals and collectively as a profession as people who care and want to give something back," Dr. Dickinson said. "Participating in a MOM is an opportunity for us to share our gifts."

The necessity of organizing charitable dental clinics on this scale, he added, is a result of dental care for adults being an optional benefit nationwide. "We only see these patients in emergency situations in Virginia and it's the same situation in other states as well. As much as the MOM project is not an answer to the access to care issue, it does provide hope to those who are financially unable to have access to dental care on their own."

Dr. Dickinson is no stranger to MOM events in New Orleans. In February 2006, MOM organizers from the Virginia, Kansas, Texas and Open Door Clinic (Alamance County, N.C.) programs and Remote Area Medical transformed the Audubon Zoo into a temporary dental clinic to help some 4,000 patients in the aftermath of Hurricane Katrina.

This year's New Orleans MOM will run from 5:30 a.m. to 5:30 p.m. on Nov. 3. A new Web page, ADA.org/MOM will go live in mid-April with information on registration, licensing requirements and other details. Volunteers can register for a half or full day. Volunteers do not have to be registered for the Annual Session to participate in the MOM event.

"ADCF operates on the 'see one, do one, teach one' philosophy," Ms. Becker said. "Dentists who come from a state that doesn't yet have a MOM program, or haven't had a chance to participate in one of their state's MOM events, should consider this a great opportunity to come and see how an event is organized. It can be overwhelming until you see how it's broken down into manageable components. And then you see the great need of people who've come for dental care, and you're hooked. It's a great way to give back to your profession and to the public."

"This event will certainly serve to let our community know that those in the dental profession seek continually to find ways to assist those who are most in need," said Dr. Ma-

New Orleans

American Dental Association
ANNUAL SESSION

ria R. Burmaster, a general dentist in Marrero, La., and one of the event's organizers. "We want to spread the message that we care about the health of our neighbors and are eager to share our talents and abilities. This event will

Photo by Dr. Ted Sherwin

provide a platform for many in the New Orleans area to be introduced to dental care that they may otherwise never be able to afford. I will certainly be a part of the volunteer corps for this event, and I am excited to work with colleagues from across the country."

Lava™ Ultimate Restorative

Monolithic Resin Nano Ceramic

Lava Ultimate Restorative

Crown, Inlay/Onlay

\$109

Our Everyday Price!

Now you can customize contacts chairside!

Lava™ Ultimate Restorative, from 3M ESPE, is a monolithic restorative material made with resin nano ceramic technology, resulting in fracture-resistant, natural looking restorations.

- Beautiful esthetics with natural chameleon effect
- Excellent durability backed by a 10 year warranty
- Easy handling, adjustability and polishability
- Easy to add on intra-orally with light cured restorative
- Less wear to opposing dentition
- Absorption of chewing forces which reduces stress
- ADA codes for all-ceramic restorative

"For the first time in history, dentistry has a resin nano ceramic indirect restorative material that we can code as a ceramic. The properties of this unique material have transformed my restorative practice."

Dr. John Cranham
Clinical Director of The Dawson Academy

2013 GKAS Institute

Apply by April 29 for leadership development grants

BY STACIE CROZIER

Give Kids A Smile coordinators nationwide can learn best practices for launching, expanding or enhancing their program by applying for a 2013 Give Kids A Smile Community Leadership Development Institute grant.

The GKAS Institute, set for Oct. 23-26 in

St. Louis, offers selected participants the opportunity to learn in-person how to initiate, expand and/or enhance a GKAS program. The program is sponsored by Hu-Friedy, Henry Schein and the ADA Foundation.

In February, Give Kids A Smile-St. Louis Executive Director Joan Allen visited south-

ern California to observe several GKAS programs conducted by dentists in the Tri-County Dental Society. Tri-County's GKAS coordinator, Monica Chavez, participated in the leadership program in 2011.

"Having trained strong leaders like Monica Chavez has helped GKAS events reach more

Ambassador in action: Monica Chavez, Tri-County Dental Society GKAS coordinator and 2011 GKAS Leadership Institute ambassador, pauses for a photo with Dr. Vijay Patel at a GKAS program in February.

kids and improve the services offered by generous and caring volunteers," Ms. Allen said. "It was exciting for me to see the enthusiastic way that many of our ideas and plans have been implemented. From T-shirts for volunteers, direct and complete dental care, goody bags of dental supplies, bright kid-friendly decorations, happy volunteers and thankful families to face painting for the kids, the message was delivered—Give Kids A Smile is a great dental care program for all underserved kids everywhere. We look forward to our next Institute in October. Sharing of best practices and ideas will make us better and stronger to serve."

A link to the online application can be found on the GKAS Community Leadership Development Institute Web page,

ADA.org/8356.aspx. The deadline is April 29.

Candidates must demonstrate commitment and ability to begin a new GKAS program or enhance an existing one; have experience with managing/chairing an access to care event; and hold a position in their organization that will allow them to effectively implement lessons learned during the GKAS Institute. Applicants do not necessarily have to be a licensed dentist or hygienist.

Participants will hone their leadership and development skills and also serve as ambassadors for the St. Louis Give Kids A Smile fall program, which will provide comprehensive care to about 650 underserved children.

Ambassadors may be assigned to serve as clinic escorts, or in areas such as check-in/check-out, sterilization, photography, triage, education, entertainment and more.

Up to 10 travel grants will be awarded. State and local dental societies and community-based organizations providing oral health care for underserved children during GKAS will be considered. Applicants must reside within the U.S. 50 states.

For more information, email gkas@ada.org. ■

Fun with kids: A Tri-County Dental Society GKAS program features face painting for participating children.

BruxZir® restorations ...

Before

After

"In the 'Before' photo, tooth #7 is an all-ceramic crown, tooth #8 is a natural tooth, tooth #9 is a natural tooth that had endo treatment and requires a crown, and tooth #10 & #11 are splinted PFM crowns. I used a BruxZir crown on tooth #9 to see how it would compare esthetically to the natural tooth and the other restorations. The natural tooth still looks most lifelike (no surprise), but the BruxZir crown looks more lifelike than the existing all-ceramic and PFM crowns."

– Michael C. DiTolla, DDS, FAGD

a more lifelike emergence profile

This image represents the typical PFM prep we receive with a conservative feather-edge margin. When a PFM is fabricated for this prep, there is a bulky 1 mm margin on the PFM that catches on the explorer. Even if the margin is sealed, the emergence profile is unacceptable.

VS

This image represents the typical PFM prep we receive with a BruxZir crown in place. Because it is a monolithic crown and can be milled to a feather edge, there is no bulk of material, or "speed bump," at the margin. Dentists tell us their explorer cannot detect where the tooth ends and the BruxZir crown begins.

BruxZir is a registered trademark of Glidewell Laboratories.

SCIENCE

ADA Laboratories comprise a wealth of often overlooked assets

BY JEAN WILLIAMS

They may be tucked away on the fourth floor of ADA Headquarters, but the ADA Laboratories really stand out when it comes to dental research.

"It's one of those hidden member ben-

efits that people don't really think about," said Dr. Ralph Howell, a general dentist who practices in Suffolk, Va. "But the ADA is at the forefront of developing scientific methods for testing dental materials and equipment, and it's nice to have an association

looking out for you."

Dr. Howell took an opportunity—his third—to tour the labs in January with Dr. John Paul of Lakeland, Fla. It was Dr. Paul's first visit to the labs. They were at ADA Headquarters for a meeting of the ADA Council

Fine adjustments: Senior laboratory technician Hank Shepelak adjusts the computerized 3-D milling machine in one of the ADA Laboratories.

on Communications, of which both are members.

"I was very impressed with the scientific labs and the scientists therein," Dr. Paul said. "My first thought was, I'm glad I'm on the communications council and a member of the House of Delegates so I can share some of their message. They may be one of the best kept secrets we have."

A group of dental students from University of Illinois at Chicago College of Dentistry visited the labs in early March as part of the ADA's Success Dental Student Programs.

Matthew Hamedani, a fourth-year dental student who is the Illinois State Dental Society delegate for UIC, said it was his first time visiting the labs. It held a few revelations for him: He didn't know so much research took place at ADA Headquarters, and he was impressed.

"It's important for us as dental students to see that there is an organization like the American Dental Association to safekeep our profession and the patients that we treat," Mr. Hamedani said. "That goes from the political aspect to the benchside in keeping up with the most advanced research and techniques as well as making sure that the products that are on the market meet the Seal of the ADA. That's very paramount if you think about it."

Housed in the Division of Science, the ADA Laboratories include a machine shop and a staff that includes dentists, dental material specialists, microbiologists, chemists and engineers.

The labs' chemistry department tests fluoride levels for some of the products in the ADA Seal of Acceptance program. The labs evaluate the performance of dental materials according to standards and guidelines set by the ADA. The laboratories are also involved in developing tests that could be used to revise or develop new ADA standards.

Additionally, the labs staff has helped lead and provide the scientific basis for the ADA's Health Screening Program, which has

Dropping in: Drs. Ralph Howell (center) and John Paul (right) visit Hank Shepelak in an ADA lab.

screened more than 60,000 dental professionals since its introduction at the Annual Session in 1964. Clinical information collected from the dental health care team at the ADA's Annual Session screening has contributed to one of the largest scientific databases pertaining to potential health risks associated with practicing dentistry.

The laboratories provide timely scientific findings on current and emerging public health issues identified by the ADA Council on Scientific Affairs and the ADA Research Agenda. The laboratories report the findings in peer-reviewed journals, presentations at scientific meetings and the ADA Professional Product Review, a quarterly online publication for clinicians.

"The ADA Laboratories are a key resource for members in several areas of research and testing," said ADA President Robert Faiella. "For instance, they're behind the scientific foundation for the unbiased Professional Product Review evaluations that guide clinicians on the purchase and use of products in dental practice."

Dr. Howell said that he's witnessed an evolution of the laboratories during his visits. "They're using computer-aided design and computer-aided manufacturing technology to make parts and pieces for machinery, which they didn't have before," he said. "Where they were making machinery and things by hand for lab testing, now they can use CAD-CAM technology to do it."

On his first visit to the laboratories, Dr. Paul said he was so enamored with the computer numerical control milling machine, which makes 3-D parts, that he wanted to take it home. "I want one really bad," he said with a laugh during a phone interview last month.

"I was amazed at what they're doing," Dr. Paul said, assuming the ADA central office involved pushing paper and not benchwork. He was introduced to a new dynamometer device that is used to test dental handpiece performance. "I was floored. I had no idea we were doing anything like that."

In addition to Seal product testing, the ADA Laboratories are currently evaluating products such as dental unit waterline treatment devices, bulk-fill composite materials, bisphenol A in dental materials, endodontic rotary files, apex locators, root canal irrigants, luting agents for ceramics, and disposable and hybrid high-speed handpieces for upcoming issues of the ADA PPR.

As did Drs. Howell and Paul, member dentists may schedule a tour of the ADA Laboratories when visiting ADA Headquarters. "We are on call to do a tour of the labs at a moment's notice," said Carol Balabanow, a coordinator in the ADA research laboratories.

To arrange a tour, contact Bridget Baxter at ext. 2397. ■

AAP publishes report on dental implant inflammation reactions

The American Academy of Periodontology has published a report reviewing current knowledge of peri-implant mucositis and peri-implantitis, inflammatory reactions in the tissue surrounding dental implants that can lead to tissue destruction and implant failure.

The April edition of the Journal of Periodontology includes "Peri-Implant Mucositis and Peri-Implantitis: A Current Understand-

ing of Their Diagnoses and Clinical Implications" to aid dental professionals in their diagnoses and disease prevention. The AAP board of trustees reviewed and approved the statement, which was developed by an expert committee that the AAP appointed.

The Journal of Periodontology is the official publication of the AAP. View the statement at joponline.org/doi/full/10.1902/jop.2013.134001. ■

brighter results.

When it comes to lasting results and efficacy, Philips Zoom WhiteSpeed LED outshines the competition. In a study, WhiteSpeed provided over 50% better whitening than Opalescence Boost, both immediately following the procedure and after seven and thirty days. It's clinically proven to whiten teeth up to eight shades in just 45 minutes, and 99% of consumers experienced little to no sensitivity with WhiteSpeed. Lasting results with minimal sensitivity — that's the bright side of Zoom WhiteSpeed.

Dental historian, researcher Dr. Hannelore Loevy dies

BY JEAN WILLIAMS

Dr. Hannelore Loevy, a world-renowned dental historian, researcher and a longtime professor at the University of Illinois at Chicago College of Dentistry, died March 24 in Chicago. She was 81.

"Dr. Loevy was a loyal faculty member and served as an effective representative of the College of Dentistry to the UIC Sen-

ate for many years," said Bruce Graham, UIC College of Dentistry dean. "She was a wise and knowledgeable parliamentarian for the college faculty meetings. She is a nationally recognized historian of the dental profession who has preserved the history of women in our profession for posterity. We shall miss her."

Dr. Loevy was born in Berlin, Germany.

Her family immigrated to Sao Paulo, Brazil, and she earned her degree in dentistry from the University of Sao Paulo in 1952.

In 1959, Dr. Loevy earned a master's degree in pediatric dentistry from UIC College of Dentistry

Ambassador: Dr. Hannelore Loevy, left, in 1965 presents an honorary certificate of membership to the Associacao Brasileira de Odontologia to Dr. Harold Hillenbrand, ADA executive director from 1946-69.

and in 1961 earned a Ph.D. in anatomy from the university's College of Medicine.

Prior to retiring in 2006, Dr. Loevy served as faculty in three departments at UIC: department of anatomy in the College of Medicine, 1963-65; department of pharmacognosy and Pharmacology in the College of Pharmacy, 1968-72; and department of pediatric Dentistry in the College of Dentistry, 1972 until retirement.

Dr. Indru Punwani, former head of the pediatric dentistry department at UIC, worked with Dr. Loevy's during her entire career at UIC.

"In 1972, she and I started as colleagues together," Dr. Punwani said. "I was the graduate program director, and she was on the faculty until she retired. I was a sitting department head for most of the period, so we knew each other quite well. She was a very committed and passionate worker. She was quite a productive person in terms of editing and writing and involvement in different dental honor societies. She was a very active individual with organized dentistry as well as academic dentistry. She was regarded very well as a teacher."

Dr. Loevy also served on the faculty of the University of Sao Paulo, Brazil; the Loyola University Chicago Stritch School of Medicine; and the Northwestern University schools of dentistry and medicine.

Her career highlights include achievements as a pediatric dentist; researcher; histology, pharmacology and pediatric dentistry professor; dental historian; and author/editor. She was prominent in local and national organized dentistry and held such leadership positions over the years as president of the Chicago Section of the American Association for Dental Research/International Association for Dental Research; president of the Illinois Society of Pediatric Dentists; former chair of the College of Dentistry Elections and Credentials Committee.

She also was the first woman to serve as regent in the International College of Dentists and the first woman chair of the Board of Governors of the Odontographic Society of Chicago.

She was editor of the Journal of the History of Dentistry from 1988-2005 and a past editor of the Journal of Dentistry for Children. She authored "Dental Management of the Child Patient," a book published in 1981, and translated "Differential Diagnosis of Diseases of the Oral Mucosa" (1989) and "Diseases of the Oral Mucosa" (1994) into English from German.

In 2005, Dr. Loevy won the Lindsay Medal from the Lindsay Society for the Study of the History of Dentistry, of Great Britain, in recognition of her work in dental history and as

ADA-developed mouthguard standard highlighted during March Madness

BY JEAN WILLIAMS

In an online article March 19, the American National Standards Institute highlighted the importance of standards in the world of sports and mentioned the ADA-developed standard for mouthguards as one of note.

The American Dental Association is accredited by ANSI to develop standards to help ensure that dental products are safe and reliable.

The ANSI article mentioned the standard that the ADA developed for mouthguards made from thermoplastic or thermosetting

polymeric materials. Said the article, "The ANS [American National Standard], ANSI/ADA 99-2001 (R2007), Athletic Mouth Protectors and Materials, covers mouthguards that can be formed by pressing the material against an individual's teeth or on a model of their teeth, and includes requirements for packaging and labeling associated with these products."

The ANSI article looked at standards through the prism of the National Collegiate Athletic Association Men's Division I Basketball Championship, informally known as March Madness, noting that standards are in place for a range of tournament-related products and elements. These include such areas as channel coding and modulation for digital multiservice distribution systems used by

cable networks; lighting setups; athletic footwear; and, of course, protective mouthguards.

ADA volunteers completed the ANSI/ADA Standard No. 99 for Athletic Mouth Protectors and Materials in 2001 and reaffirmed it in 2007 to specify requirements for developing a prophylactic device to prevent injuries related to contact sports, including basketball. ■

Sports dentistry meeting Aug. 1-3

BY STACIE CROZIER

Philadelphia—From hands-on continuing education to inspiring messages from world class athletes and leaders in the field, the Academy for Sports Dentistry's 31st Annual Symposium Aug. 1-3 features an action-packed lineup for dentists who want to step up their game in working with sports dentistry patients.

"This year, our planning committee wanted to ramp up the level of presentations and the variety of topics for all of our attendees," said Dr. Rick Knowlton, 2013 annual meeting chair. "Because Philly is one of the hot beds for dental education as well as sporting activities, we gathered some of the top speakers in both the fields of dentistry and athletics to present at our symposium, with the theme 'Enhancing the Vision of Sports Dentistry.'"

Courses will cover the variety of roles the team dentist plays; recognition and treatment of dental trauma, preparation and readiness from preseason to game time; and medication

use for athletes. Other topics include legal considerations for team dentists; recent changes in the treatment of avulsions; how to effectively market sports dentistry skills, sleep apnea issues

for athletes; evaluation and management of concussions; and effective restoration of anterior teeth after trauma. The symposium also features a variety of hands-on workshops, including custom mouthguard fabrication, intra-oral suturing; and comprehensive oral cancer screening, lesion assessment and biopsy techniques.

Dr. Steve Perlman, founder and global clinical director of the Special Olympics Special Smiles program, will discuss screening protocol, referral and sports injury prevention for patients with developmental disabilities. William Moreau, D.C., managing director of sports medicine of the United States Olympic Committee will speak on improving dentistry for Olympic athletes. Professional mountain climber Sam Elias will share photos and videos and recount his experiences as an athlete, including his Mt. Everest climb and how he has dealt with training stress and injuries on his road to becoming a world-class athlete.

The welcome reception, continental breakfasts, exhibition, recognition lunch and the president's reception are included in the registration fee. The meeting will convene at the DoubleTree by Hilton Hotel Philadelphia Center City. A special group rate for hotel rooms is available for the meeting.

For more details or to register, visit the website: academyforsportsdentistry.org. ■

Special attention for Sjogren's syndrome in April

Bethesda, Md.—More than 4 million Americans suffer from Sjogren's syndrome, according to the Sjogren's Syndrome Foundation, and the syndrome is in the spotlight in April, which is national Sjogren's Awareness Month.

With Sjogren's syndrome, a person's white blood cells attack his or her moisture-producing glands. The disease is often underdiagnosed or misdiagnosed, says the SSF. The most common symptoms of Sjogren's syndrome include dry mouth and eyes, fatigue and musculoskeletal pain. The disease

is more prevalent in women, who account for nine out of 10 patients with the disease, SSF says.

During Sjogren's Awareness Month, SSF encourages health care professionals, especially dentists, eye doctors and gynecologists, to keep the chronic disease top of mind as sufferers often are misdiagnosed on average for 4.7 years before a determination of Sjogren's syndrome is finally made, says SSF.

New York-based Carroll Petrie Foundation has donated \$100,000 to SSF to help the or-

ganization increase awareness.

SSF is a nonprofit organization based in Bethesda, Md.

It was founded in 1983 to provide patients with practical information and coping strategies that minimize the effects of Sjogren's. SSF also acts as a clearinghouse for medical information and a national advocate in the battle against the disease.

The Carroll Petrie Foundation is a private foundation based in New York City.

For more information about Sjogren's syndrome, visit sjogrens.org. The National In-

stitutes of Health (nih.gov) and the National Institute of Dental and Craniofacial Research (nidcr.nih.gov) also have resources on Sjogren's syndrome.

Based at the University of California, San Francisco, the Sjogren's International Collaborative Clinical Alliance (sicca.ucsf.edu/index.html) is another source of information. SICCA is a collaboration of clinical and laboratory investigators from institutions worldwide who study individuals with Sjogren's syndrome and compile the International Sjogren's Syndrome Registry. ■

Membership a bargain for recent grads

Did you know that recent graduates can take advantage of special savings on ADA membership dues during their first four years following dental school graduation?

It's true.

- The first year following dental school graduation, the national dues rate is \$0;
- The second year, it's 25 percent of full dues (\$131);
- The third year, it's 50 percent (\$261);
- The fourth year, it's 75 percent (\$392);
- The fifth year and thereafter, 100 percent (\$522).

If you haven't joined the ADA yet, contact us now to start taking advantage of the benefits that more than 157,000 of your colleagues already enjoy. If you're in a residency or advanced dental education training program, you'll pay \$30 while in training and continue with reduced dues once you've completed your training.

To apply for membership, complete an application at ADA.org/join; contact your state dental association; or call 1-312-440-2500. ■

Dr. Loevy

Continued from Page 20

editor of the Journal of the History of Dentistry. The medal commemorates the accomplishments of Dr. Lilian Lindsay, who was the first woman president of the British Dental Association and her husband, Dr. Robert Lindsay.

Dr. Loevy won other awards and honors for her accomplishments, including the Merle C. Hunter Leadership Award of the American Academy of Pediatric Dentistry; Distinguished Service Award from the Craniofacial Biology Group of the International Association for Dental Research; the Award of Merit from the Odontographic Society of Chicago; and UIC's F. William Towner Award in 2004.

A daughter, Luciana Taschini, survives her. Husband, Dr. Pierangelo Taschini, and daughter Thea Clara Taschini preceded her in death.

Services were held March 28 in Chicago. ■

ADA Foundation names first Dr. Ray Bowen winner

In cooperation with the Academy of Operative Dentistry, the American Dental Association Foundation awarded the first biennial Dr. Ray Bowen Student Research Fellowship to a predoctoral student at the University of Michigan School of Dentistry.

Shalini S. Kamodia received the 2013 fel-

lowship this spring for her proposed research project Remineralizing Deproteinized Enamel Caries Lesions with Carbonated Amorphous Calcium.

Formerly known as the George C. Paffenbarger Student Research Award, the fellowship was renamed to honor the nearly 60-year career of Dr. Bowen, credited as the inventor of resin composites and dentin adhesives and an internationally recognized authority on composite materials.

The fellowship is awarded every two years and provides \$6,000 to support the proposed

Ms. Kamodia

Dr. Bowen

research and up to \$1,000 to defray the cost of the winner's attendance at the Academy of Operative Dentistry's scientific session to present a table clinic based on the proposed research. Any dental student at any level is eligible if he or she has a research mentor who belongs to the Academy of Operative Dentistry and who will provide guidance and serve as a co-investigator on the winning project.

To make a tax-deductible donation to the ADAF to support the Dr. Bowen Fellowship or other efforts, visit www.adafoundation.org or call 1-312-440-2547. ■

JADA updates submission requirements

BY LISBETH MAXWELL

The Journal of the American Dental Association is making some changes aimed at bringing The Journal even more in line with the other top scientific publications in health care.

"JADA's editors have always taken pride in The Journal's status as the ADA's flagship publication, and our goal is to ensure that manuscripts submitted to JADA meet the highest scientific standards," said Dr. Michael Glick, JADA editor. "These new requirements will help keep JADA readers up to date on clinical developments in the field, in a way that reflects the best of scientific publishing."

Starting June 1, authors submitting manuscripts to JADA will have to meet the following requirements:

- Each author must provide a statement of responsibility detailing what he or she contributed to the manuscript.
- Authors of articles about clinical trials must adhere to the Consolidated Standards of Reporting Trials statement (www.consort-statement.org/consort-statement/overview0/).
- Authors of articles about clinical trials that began enrollment of participants on or after March 1 this year must register the trials publicly before any participants are enrolled in the study. Trials that began enrollment before March 1 also must be registered, but registering trials after enrollment of participants has begun is acceptable. Clinical trials need not be registered on any specific website; a list of registries acceptable to JADA is available on the International Committee of Medical Journal Editors website at www.icmje.org/faq_clinical.html.
- Authors of manuscripts about clinical trials must use intention-to-treat analysis.
- Authors of systematic reviews must adhere to Preferred Reporting Items for Systematic Reviews and Meta-Analyses, available at www.prisma-statement.org/statement.htm.
- Authors must ensure that their articles describe practical implications of their findings; in other words, they must answer the question, "What does this mean for a dentist's practice?"
- Where possible, authors should provide information on further resources regarding the clinical and practical implications of their articles.

Further information is available online in JADA's guidelines for authors at ADA.org/995.aspx.

Editor's note: Ms. Maxwell is the editorial director of The Journal of the American Dental Association. ■

Education You Won't Find Anywhere Else

The ADA Annual Session is always pushing the boundaries of innovative and practical CE. Register early to include one of these options in your schedule this year:

Hands-On Cadaver Courses

Learn by doing — take a hands-on approach to performing dental procedures in a state-of-the-art anatomy lab. Your favorite presenters are back by popular demand.

ADA Presidential Whistle Stop

Spend your time wisely at the Annual Session. Why wait in line when you can earn CE hours and have a seat reserved at the Distinguished Speaker Series featuring President Bill Clinton?

Health and Fitness Center

Select from a variety of lectures on posture techniques, nutrition, fitness and more. The Lunch and Learn options are another way to maximize your time.

ADA365

All ADA members have online access to ADA365 year-round, with select Annual Session courses available for viewing on-demand.

Register at **ADA.org/session**

1. Register for the meeting

Once you register, you can return to the system to add courses and special events later. Don't wait too long, though, because all tickets are available on a first-come, first-served basis.

2. Reserve your hotel room

Stay at an ADA official hotel during the Annual Session and take advantage of special ADA rates that include in-room Internet access and other amenities.

3. Book your flight

Book discounted flights on American, Delta and United Airlines through Gant Travel, ADA's official travel partner. Be sure to book early to ensure your first choice of flights!

4. Build your schedule

All Annual Session courses are ticketed, even free lectures. Refer to Preliminary Program online at ADA.org/session, and use eventScribe to search for courses and build your customized schedule.

Tickets for fee courses, Education in the Round and workshops guarantee your seat for the duration of the course. Tickets for no-fee courses hold your seat until the published start time of the course.

If you would like to request a hard copy of the Preliminary Program mailed to you for free in May, visit ADA.org/session or call the Member Service Center at 800.947.4746.

You shouldn't have to guess what your payment processor is really charging you.

As an ADA Business Resources provider for more than 10 years, Chase Paymentech has provided thousands of dentists with exceptional service and technology for payment processing. While many companies have confusing pricing structures, Chase Paymentech offers clear and transparent pricing that could save you up to \$1000 a year*—with no hidden fees and no long-term contracts. Enrollment is quick and simple and their EMV terminal accepts all kinds of payment options including letting your patients pay quickly and safely with just the wave or tap of a bank card.

Switch today and save \$400.

For a limited time, ADA members who open a new merchant account can purchase the Chase Paymentech EMV terminal for only \$100** — a \$400 savings.

Call today at 800.618.1666 or visit bestpaymentprocessing.com/ada

**RESEARCHED.
PROVEN.
ENDORSED.**

The companies we select are committed to helping you maintain a positive and productive practice. We only extend our endorsement to companies that are fiscally sound, offer ADA Member preferred pricing, and deliver high quality customer service.

Free CE, camaraderie drive high turnout for N.Y. new dentists

BY KAREN FOX

New Hyde Park, N.Y.—For many dentists, society meetings are the No. 1 source of information sharing and networking.

Recognizing the value of these events, some are taking steps to reinvigorate theirs through special offerings. In the fall of 2012, the Nassau County and Queens County dental societies of New York partnered to sponsor a Young Dentist Program exclusively for new dentists that included a free continuing education component.

"It was tremendously successful for a first-time event," Dr. Stuart Jay Heimann, chair of the NCDS New Dentist Committee, said of the more than 140 who attended. Dr. Heimann co-chaired the event with Dr. Albert Yoo of the Queens County Dental Society.

"To have such a big group turn out, and the fact that 98 percent of them were under age 40, really tells us that people are looking for this type of event where they can come together and socialize, network and learn," said Dr. Heimann. "We tend to practice disconnected from people, but events like this give everyone an opportunity to connect."

"The event was a great success, not just because of the incredible turnout, but because it showed what is possible when we pull resources together to organize a great meeting," added Dr. Yoo.

"The attendees saw that the value of organized dentistry is more than political action and discussion—it can also be a great time."

NCDS and QCDS were able

to sponsor the event at a popular Long Island restaurant at no charge to participants thanks to contributions from Colgate, Patterson, Henry Schein, Nobel Biocare, Nu Life Long Island and Bank of America, and funds from the ADA through the Membership Program for Growth.

The ADA Council on Membership started the Membership Program for Growth in 2010 to provide the tripartite with the ability to work together to build membership growth by developing and implementing customized marketing plans and campaigns. The ADA received more than 100 applications in 2012 and the council funded 86 programs. The council is in the process of gauging the results of those programs.

New dentists are an important segment of membership for dental societies, and getting them involved early on is key to their personal and professional development.

"These functions probably do two things," explains Dr. Heimann. "One is to inform members by giving them the tools to be successful in their careers. Dental societies want new dentists to become familiar with the ADA and its societies so they know that these organizations are looking out for them. A secondary goal is to help them meet other new dentists who often have similar experiences at this point in their careers."

Having a robust CE offering was key to high attendance, Dr. Heimann added. The

program included a presentation by periodontist Dr. Alicja McCrudden on Socket Preservation and Ridge Augmentation. Dr. Mark Bauman, ADA Council on Membership chair, and Dr. Maria Maranga, New York

Valued CE: Periodontist Dr. Alicja McCrudden presents her workshop to 140 new dentists on Long Island in October 2012.

State Dental Association Council on Membership chair, shared information on peer review, professional liability and the NYSDA registry of member CE that ensures members are meeting state licensing requirements.

The event was only the beginning of a long-term effort to involve new dentists, said Dr. Heimann.

"If only a few new dentists become active after an event like this, I think that's a success," said Dr. Heimann. "We started a dialogue here and now we have to keep it going." ■

—foxk@ada.org

104,810

ADA dentists, dental students, and their family members (and counting!) own ADA-sponsored insurance.

New dentists: Dr. Stuart Jay Heimann (right) and Dr. Albert Yoo co-host the event.

"I hear other dentists complain about paying too much for insurance, not getting good service, and so on. My response: check out the ADA and Great-West. I can't say enough good things about what they've done for me."

— Carmella Fanelle, D.D.S.

"I looked into a few other companies, but found that I couldn't get a better deal than through the ADA-sponsored group policy."

— Jacy Robling, D.D.S.

"GreatWest was much easier to work with, and much more understanding, than the other company (when filing for disability benefits)."

— R. Todd Erickson, D.D.S.

More ADA members choose us every day for life, disability and supplemental medical insurance. And meeting their unique insurance needs is all we do. Which are just some of the reasons why our participating members say it's a smart move.

FDI Congress seeks to connect dentists worldwide in Istanbul

BY STACIE CROZIER

Istanbul—In the city where Europe and Asia are connected by a pair of magnificent suspension bridges, dental professionals from around the world will be “Bridging Continents for Global Oral Health” during the FDI World Dental Congress Aug. 28-31, at

the Istanbul Congress Center.

A preliminary program is available on the congress website, fdi2013istanbul.org. Early registration discounts are available through May 31.

The FDI World Dental Federation and the Turkish Dental Association are collaborating to organize the congress. The FDI, with some

Photos courtesy Turkish Culture and Tourism Office

Istanbul shopping: The Grand Bazaar offers a unique experience for both visitors and residents.

200 member national dental associations and specialist groups from more than 130 countries, serves as the principal representative body for more than 1 million dentists worldwide.

“Istanbul needs little introduction: straddling the Bosphorus—one of the world’s busiest waterways—it is Turkey’s cultural capital, former seat of four empires and, today, an attractive destination for international meetings, boasting a brand new state-of-the-art convention center and wide choice of world-class hotels and other accommodations,” said Dr. Orlando Monteiro da Silva, FDI president, and Dr. Taner Yücel, TDA president in a joint invitation. “Easily accessible by road rail, sea and air, Istanbul offers the visitor an unforgettable experience with its colorful neighborhoods, warm, sunny climate, especially in late August, hospitable local population and superb cuisine and entertainment.”

“The congress is a wonderful opportunity for ADA members to participate in an international dental congress and to network with the international dental community including dentists from other FDI member associations,” said Dr. Kathryn Kell, a general dentist in Davenport, Iowa, and treasurer of the FDI World Dental Federation.

The congress will feature a broad scientific program including panel discussions, conferences, poster presentations, forums and interactive sessions on dentistry’s cutting edge topics and disciplines. The program will also feature morning breakfast meetings, meet the expert sessions, a year in review session and courses for other oral health team members. The official language of the congress is English and the FDI World Dental Federation is an approved ADA CERP provider.

Attendees who are interested the latest developments in dental technology and oral care from local, regional and global suppliers can attend the congress’s free 5,000-square-meter exhibition.

Outside the convention center, Istanbul’s culture, architecture, cuisine and attractions offer something for everyone.

Social programs available to those attending the meeting include the FDI opening ceremony Aug. 28 in the ICC auditorium, the Gala Dinner Aug. 29 at the Rumeli Garden and a Bosphorus cocktail cruise Aug. 30.

The FDI has planned several short tours that highlight Istanbul’s many treasures and attractions. Guests can explore sites including the Roman Hippodrome (an ancient chariot race track), the Serpentine Column, the Column of Constantine, the Egyptian Obelisk, the Church of St. Saviour, the Byzantine Basilica, the Topkapi Palace, the Grand Bazaar, Hagia Sophia Museum, the Basilica Cistern, the Istanbul Archaeological Museum and the Ottoman Blue Mosque. Two tours also feature cruises.

A pre-congress tour to Cappadocia will be available Aug. 26-28 and post-congress tours to Ephesus and Gallipoli and Ancient Troy are set for Sept. 1-3.

Register for the meeting, social programs and tours at fdi2013istanbul.org. The website also offers links to reserve hotel accommodations and flights and information for visitors. ■

Breathtaking views: The Ortakoy Mosque is one of Istanbul’s landmarks.

Focus on Oklahoma oral surgeon puts spotlight on infection control in dentistry

BY JEAN WILLIAMS

Tulsa, Okla.—In the wake of reports of an alleged breach of standard infection control practices by a Tulsa, Okla., oral surgeon last month, the ADA is reinforcing its ongoing message that dental health professionals take every precaution to protect patients and themselves.

According to the Oklahoma State Department of Health, some 7,000 patients potentially were exposed to bloodborne viruses, including human immunodeficiency virus, hepatitis B and hepatitis C. The Tulsa Health Department, the Oklahoma State Department of Health and the Oklahoma Board of Dentistry are jointly investigating the oral surgeon, as stated in a letter to patients on the OSDH website.

The dental board “so far has found numerous violations of health and safety laws and major violations of the State Dental Act,” said a March 28 OSDH news release. “Dental Board investigators have been assisted by agents from the Oklahoma Bureau of Narcotics and the United States Drug Enforcement Administration concerning the maintenance, control and use of drugs on the premises.”

Authorities are notifying the thousands of patients who have visited the oral surgeon since 2007, advising them to be tested for potential infection. About 1,700 patients had been tested at press time.

Susan Rogers, Oklahoma Board of Dentistry executive director, and Dr. Brad Hoopes, board president, told the ADA News that the 11-member board has followed the lead of the state’s health department in pursuing an investigation. The department of health had spent three months on the investigation before alerting the dental board, they said.

“I feel the board has done exactly what they should have done,” Dr. Hoopes said. “We appointed a review panel. We’ve reviewed it [the allegations]. We did a statement of complaint. We suspended his license initially, and he is set for a hearing the 19th of this month. That is the normal procedure we’d do with any issue like this. The only difference with this one is obviously the health department went in front of us. They took the ball and did what they felt they had to do.”

Dr. Hoopes said that “no portion of the dental board or organized dentistry had control over” any of the information the health department released.

The board ordinarily meets quarterly, and the next regular meeting is in August. The April 19 emergency hearing is the oral surgeon’s right, Ms. Rogers said.

“By our state law, he has a right to a hearing for an emergency temporary suspension within 30 days,” Ms. Rogers said. “He can waive it, and we will sit for a formal, pending hearing for a final determination on his license.”

Ms. Rogers said the hearing is the beginning of due process, and a dentist can appeal a board decision to the district court.

After the story broke in the national media March 28, the ADA distributed two Issues Alerts to members that cited resources on infection control. The Association also addressed the breaking news story in a press release on March 29, and ADA spokespersons have been quoted in national media reports of the case.

ADA President Robert Faiella communicated with dental leadership groups about the evolving story in the April 5 edition of the ADA’s Leadership Update.

“When standard infection control practices as recommended by both the CDC and the ADA are followed, dental offices remain an

extremely safe place to receive oral health care,” noted Dr. Daniel Meyer, senior vice president, ADA Division of Science and Professional Affairs.

Resources are available on the topic of standard precautions for infection control and prevention from the ADA, the Centers for Disease Control and Prevention and the Organization for Safety, Asepsis and Preven-

tion. The CDC is calling particular attention to materials on injection safety and effective sterilization procedures and monitoring.

Some CDC resources include:

- Guidelines for Infection Control in Dental Health-Care Settings (2003), including a PowerPoint slide presentation. Find these resources at cdc.gov; search for the title provided here.

- Safe Injection Practices in Dentistry. Visit CDC.gov and search for this title.

- The One and Only Campaign. Visit www.oneandonlycampaign.org for details about this CDC campaign with the goal of raising awareness among patients and health care

Innovative Design. Reliable Performance.

ADA infection control guide bases instruction on clinical procedures

Infection control and prevention receive in-depth coverage in the revised edition of the ADA Practical Guide to Effective Infection Control, a 40-minute DVD and workbook.

Actual clinical procedures are used in the DVD presentation to illustrate correct, safe and efficient infection control, and the workbook reinforces the topics covered on the DVD.

The new edition includes:

- an expanded section on work practice controls for needles and other sharps;
 - World Health Organization hand rub and hand wash instructional illustrations;
 - updated infection control guidelines for radiographic procedures.
- Additional topics include:
- guidelines for disinfection of dental prostheses and impressions, chairside infection

control and more;

- updated lists of recommended resources and Web resources for current information regarding infection control;
- self-assessment checklist of current infection control practices.

The guide includes a CE test worth eight hours of continuing education credit.

The ADA Practical Guide to Effective Infec-

tion Control (P692) is available is \$135 for members and \$202.50 for nonmembers. Through April 30, buyers can receive \$20 off the purchase price using promotional code 13121.

Visit ADAcatalog.org for additional product details or to order, or call 1-800-947-4746. ■

Safety checklist on ADA.org

The ADA Council on Dental Education and Licensure sponsors a Safety Awareness Campaign to promote the need for the dental team to routinely inspect their office equipment and supplies.

A safety checklist is available for dentists and their staff to use as a guide to inspect for safety and a variety of equipment and supplies such as nitrous oxide apparatus, sterilization protocols and medications in emergency drug kits.

Download a copy of the checklist at ADA.org/1692.aspx. ■

Louisville students learn to manage oral-systemic problems as team

BY KAREN FOX

Louisville, Ky.—Interdisciplinary team-building is underway at the University of Louisville.

A new educational initiative will have nursing and dental students collaborate to better identify and manage systemic diseases such as diabetes and cardiovascular disease. The schools of nursing and dentistry received nearly \$1.1 million from the U.S. Department of Health and Human Services Health Resources and Services Administration in 2012 to support the project.

The shift in education reflects the work of the Interprofessional Education Collaborative, a consortium of organizations including the American Dental Education Association, American Medical Association and American Association of Colleges of Nursing, which has highlighted the need for students in health professions to become proficient collaborators so they are better prepared to practice effective team-based care.

U of L students will take combined courses to better prepare nursing students to conduct oral examinations and dental students to broaden

en their knowledge on how oral health is connected to overall health.

"As research continues to link oral health and general health, we understand the need for this type of education," said Dr. John Sauk, dean of U of L School of Dentistry. "Oral diseases, for example, can point to undiagnosed diabetes or poor nutrition. We know there is a correlation between a certain bacteria in the mouth and heart disease. This partnership can teach students in both disciplines how to manage oral-systemic problems."

U of L's nursing and dental schools would like to be part of a new paradigm of health care delivery, where patients can receive primary care and dental care in one stop like the model established at the New York University colleges of nursing and dentistry.

"It is not unusual for dentists to screen for highly prevalent health conditions like diabetes and heart disease," said Dr. Wendy Hupp, U of L assistant professor of oral medicine. "As the population continues to age and struggle with chronic illness, we see the need for new effective forms of health care delivery. NYU's model offers reciprocal referral and consultation opportunities between the dental clinic and the nurse practitioner-managed faculty practice."

A poll conducted of dental school patients showed that 27 percent had no primary care provider and 66 percent would seek primary care at a nurse practitioner-managed clinic if one were available.

"If we were able to offer a nurse practitioner-managed primary care clinic here at the dental school, the benefit to patients would be profound," Dr. Hupp added. ■

Free CE, camaraderie drive high turnout for N.Y. new dentists

BY KAREN FOX

New Hyde Park, N.Y.—For many dentists, society meetings are the No. 1 source of information sharing and networking.

Recognizing the value of these events, some are taking steps to reinvigorate theirs through special offerings. In the fall of 2012, the Nassau County and Queens County dental societies of New York partnered to sponsor a Young Dentist Program exclusively for new dentists that included a free continuing education component.

"It was tremendously successful for a first-time event," Dr. Stuart Jay Heimann, chair of the NCDS New Dentist Committee, said of the more than 140 who attended. Dr. Heimann co-chaired the event with Dr. Albert Yoo of the Queens County Dental Society.

"To have such a big group turn out, and the fact that 98 percent of them were under age 40, really tells us that people are looking for this type of event where they can come together and socialize, network and learn," said Dr. Heimann. "We tend to practice disconnected from people, but events like this give everyone an opportunity to connect."

"The event was a great success, not just because of the incredible turnout, but because it showed what is possible when we pull resources together to organize a great meeting," added Dr. Yoo.

"The attendees saw that the value of organized dentistry is more than political action and discussion—it can also be a great time."

NCDS and QCDS were able

to sponsor the event at a popular Long Island restaurant at no charge to participants thanks to contributions from Colgate, Patterson, Henry Schein, Nobel Biocare, Nu Life Long Island and Bank of America, and funds from the ADA through the Membership Program for Growth.

The ADA Council on Membership started the Membership Program for Growth in 2010 to provide the tripartite with the ability to work together to build membership growth by developing and implementing customized marketing plans and campaigns. The ADA received more than 100 applications in 2012 and the council funded 86 programs. The council is in the process of gauging the results of those programs.

New dentists are an important segment of membership for dental societies, and getting them involved early on is key to their personal and professional development.

"These functions probably do two things," explains Dr. Heimann. "One is to inform members by giving them the tools to be successful in their careers. Dental societies want new dentists to become familiar with the ADA and its societies so they know that these organizations are looking out for them. A secondary goal is to help them meet other new dentists who often have similar experiences at this point in their careers."

Having a robust CE offering was key to high attendance, Dr. Heimann added. The

program included a presentation by periodontist Dr. Alicja McCrudden on Socket Preservation and Ridge Augmentation. Dr. Mark Bauman, ADA Council on Membership chair, and Dr. Maria Maranga, New York

Valued CE: Periodontist Dr. Alicja McCrudden presents her workshop to 140 new dentists on Long Island in October 2012.

State Dental Association Council on Membership chair, shared information on peer review, professional liability and the NYSDA registry of member CE that ensures members are meeting state licensing requirements.

The event was only the beginning of a long-term effort to involve new dentists, said Dr. Heimann.

"If only a few new dentists become active after an event like this, I think that's a success," said Dr. Heimann. "We started a dialogue here and now we have to keep it going." ■

104,810

ADA dentists, dental students, and their family members (and counting!)
own ADA-sponsored insurance.

New dentists: Dr. Stuart Jay Heimann (right) and Dr. Albert Yoo co-host the event.

"I hear other dentists complain about paying too much for insurance, not getting good service, and so on. My response: check out the ADA and Great-West. I can't say enough good things about what they've done for me."
— Carmella Fanelle, D.D.S.

"I looked into a few other companies, but found that I couldn't get a better deal than through the ADA-sponsored group policy."
— Jacy Robling, D.D.S.

"Great-West was much easier to work with, and much more understanding, than the other company (when filing for disability benefits)."
— R. Todd Erickson, D.D.S.

More ADA members choose us every day for life, disability and supplemental medical insurance.

And meeting their unique insurance needs is all we do. Which are just some of the reasons why our participating members say it's a smart move.
